RE: Performance Certificate for SCADA/ADMS System for Oklahoma Gas & Electric, United States of America

This letter confirms Open Systems International Inc. (OSI) USA has done the supply, design, engineering, installation, testing, and commissioning of the SCADA/ADMS system for Oklahoma Gas & Electric for monitoring and control of OG&E's electrical power distribution systems (12.5 KV-34.5KV). The supplied system includes the following components:

- Real-time data acquisition reporting from and Interface of approximately 4000 Remote Terminal Units (RTUs)
- SCADA Software supporting alarm, tagging, trending, SOE, real time data acquisition & calculations
- DMS software supporting load flow, loss minimization via feeder reconfiguration, FMSR (Fault Management and System Restoration), Volt-Var control
- OMS software supporting Outage Management, Outage Analysis & Prediction, Crew Management, Switch Management and field Scheduling & Dispatching.
- Software functional redundancy for SCADA and ADMS functions

The OSI SCADA/ADMS system was successfully commissioned on 23 June 2017 and the OMS system was successfully commissioned on 05 November 2019. The systems were delivered according to the agreed upon schedule. Both systems are operational, in good standing and have been under OSI's support and maintenance program.

Please feel free to contact OG&E's representative should any further details be required.

Sincerely,

Cristi R Killian
